Among these are: Online password generators Password managers Off-the-shelf random number generators Online password generators are not secure; they do not generate a truly random password. They often require entry of the user's name and email address, and if used to generate passwords for a system which requires a stronger password, the user may be exposed to security risks. Password managers are a collection of tools for creating a safe and convenient password, while online generators do not create a safe and convenient password. The most secure option is to use a random number generator, such as online, offline or using standard software.
