---

SharePoint 2010 Enterprise solution. I am trying to migrate my Microsoft Access database (.mdb) to Microsoft Access databases (.accdb) in the SharePoint site with every table and format. I have gone through the "Export and Import File Types" option in SharePoint. I am able to export the tables and the data successfully. However, when I import the same, the fields are not imported in the right format. All the fields are imported in the type of "Text". The exported data format is "Decimal", "String", etc. I have created my database from Microsoft Access, I have set the data type of the fields as "Decimal" and "Integer" and the column sizes as Large. How can I make sure that the fields are imported in the right format? I am using Microsoft Access 2010. Have a suggestion for improving our service? Let us know! Note: If you need help with your Microsoft Access database, please visit the Help
